Claim 7 is rejected under 35 USC 102 as being anticipated by Eda(857). As in the previous office action the examiner refers to figures 30 and 31. A quick glance specifically at figure 30 D, 31 A and 31 D shows a piezoelectric crystal blank #21 a cover #25 a mounting substrate ##24 having external terminals #26 a, 26 band connection electrodes #27 a, 27 b.

Claims 1-6 and 8-16 are allowed. Although the examiner believes that the use of Boro silicate glass for the cover of Eda would have been obvious to one of ordinary skill in the art from the teaching of Chason, this would not explicitly sure the combination of the high mobility ion glass anode bonded to a silicon substrate.

Further cited of interest to show the use of borosilicate glass as a material for housing piezoelectric transducers is Chason.
